

PNEUMATIC DEAD HEAD STOP AND REMAIN STOPPED PROTECTION SYSTEM (PDHS)

This pneumatic protection system turns off the pump if the discharge pressure rises to the set point. It means, that the pumps will not be working inefficiently.

By using this closed discharge valve protection system, the lifetime of the pump's diaphragm can be elongated. Moreover, the consumption of the compressed air can be reduced. It also limits the discharge pressure of the pump, which means more safe and reliable operation. After the pump is switched off by the device, it should be manually restarted.

Product code:

PDHS-xxx

Pump size ———

Spare parts:

1	Guardian	GRDD-xxx
2	Wet parts adapter	ADPT-xxx
3	Pneumatic set	PNEK-xxx
