

PNEUMATIC DRY RUN PROTECTION SYSTEM (PDRN)

Pneumatic dry run protection system turns off the pump in case when a discharge pressure of the pump falls below the set point.

This system can turn off the pump in case of an ineffective work, or when the task of the pump (i.e. unloading of a tank) is accomplished.

By using the dry run protection system, the lifetime of the pump's diaphragm can be elongated. Moreover, the consumption of the compressed air can be reduced. After the pump is switched off by the device, it should be manually restarted.

Product code:

PDRN-xxx

Pump size ———

Spare parts:

1	Guardian	GRDD-xxx
2	Wet part adapter	ADPT-xxx
3	Pneumatic set	PNEK-xxx
