All about your flow

We began our journey in 1980 in Kungälv, a small town on the Swedish west coast, as a family company with an ambition to one day become a global player on the pump market.

Since the foundation, we have taken pride in delivering a wealth of knowledge and passion for pumps to the industry, whilst supplying a wide range of premium products for various industrial applications.

Over the years, the company has developed into a global Tapflo Group with branches and distributors present in nearly every region of the world.

One thing did not change - we are still a family company.

Our solutions are designed and manufactured in Europe and distributed globally to offer the best service and flow solutions to our customers for a variety of applications.

Our values, Commitment, Quality and Simplicity are reflected both in our product and business approach.

For fast and flexible service and high-quality products readily available worldwide, choose Tapflo.

Quality commitment

At Tapflo we are simply committed to quality. As a result, our production standards, as well as products quality, comply with various globally recognised certification and quality control standards. The Tapflo manufacturing process is certified according to ISO 9001:2015, confirming that our processes are appropriate, effective, customer-focused and continuously improved.

CERTIFIED

REACH Compliant

Our culture is concluded in Our values

Commitment

We are different from our competitors because of our willingness to exceed the customers' expectations, move fast and be flexible. Our culture is based on the spirit of togetherness, enthusiasm and integrity. We come from all over the world but we share the same values and we respect each other. We are committed.

Quality

We understand that the quality in our work is never better than the weakest link, that's why we focus on every small detail. We share a common passion for continuously finding more efficient and effective ways to provide value to our customers. As a manufacturer we have control of the complete process both in terms of our products and the way we operate internally. That is why we manufacture the highest quality pumps in our segment.

Simplicity

We have a saying, "Simple is art" which means we try to find smooth and uncomplicated solutions in everything. By keeping it simple we can focus on the essential, like designing uncomplicated pumps with few components. For us it is a key to success; strive to simplify what is complex.

DPT Pulsation Dampeners

Significantly less pulsations vibrations hammering

DPT pulsation dampeners reduces pulsations, vibrations and hammering in the piping up to **80%**, by using a stainless steel pressure housing with a reinforced rubber hose surrounded by a volume of air.

Features & Benefits

Reduces downtime & maintenance costs

Easy to clean - inner part of the hose and inserts are the only parts in contact with the liquid

For different pumps

Dedicated for peristaltic pumps but also suitable for other pump types

Certified design

In accordance with the European PED Directive 2014/68/EU

For difficult liquids

Can handle abrasive, corrosive, viscous liquids with particles up to 20% of the inner hose diameter

V

Lifting eyes (optional)

For better handling and safety at work

Hose pumps, due to their design, generate pulsations.

Hose with liquid and particles inside Compressed air or nitrogen

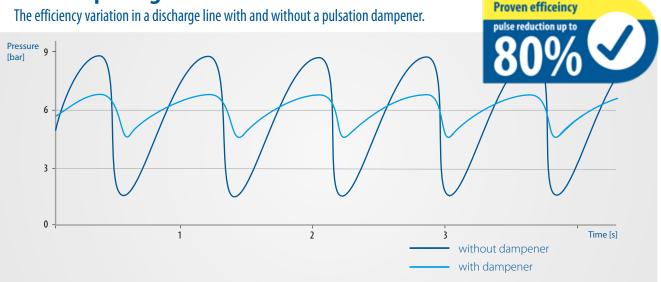

This occurs, when the shoes leave the hose after compression on the discharge side of the pump. The compressed hose of the hose pump returns to its original shape, thus the volume at the discharge of the pump increases. This results in pressure drops at the discharge line of the installation creating unwanted pulsations, vibrations and hammering

in the piping.

Tapflo DPT pulsation dampeners reduces these pulses up to 80%, by a compressed vessel with a reinforced hose filled once with compressed air or nitrogen.

The lifetime of the hose in the hose pump, the reliability of the pump itself, as well as the performance of the installation are fully optimized.

The dampening effect

Tapflo DPT pulsation dampeners change a pulsating flow into a more linear one. The dampener installed at the pump outlet (light blue) decreases the flow pulsation, compared to one without it (dark blue).

Proven pulsation reduction up to 80%. The use of a pulsation dampener is the most effective way to improve the performance of your system by reducing flow pulsations as well as their negative impacts on piping systems.

The dampeners can operate in a vertical or horizontal position.

Available connections

Modular flange (standard) EN 1092-1 PN16 or ANSI 150 flange

Available hoses materials

Hygienic fittings DIN 11851

Tri-Clamp connections DIN 32676 or ASME BPE clamp (DIN 32676 serie C)
