AIR OPERATED DIAPHRAGM PUMPS

All about your flow™

www.tapflo.com
All about your flow

We began our journey 40 years ago in Kungälv, a small town on the Swedish west coast, as a family company with an ambition to one day become a global player on the pump market.

Since 1980, we have taken pride in delivering a wealth of knowledge and passion for pumps to the industry, whilst supplying a wide range of premium products for various industrial applications.

Over the years, the company has developed into a global Tapflo Group with branches and distributors present in nearly every region of the world.

One thing did not change - we are still a family company.

Our solutions are designed and manufactured in Europe and distributed globally to offer the best service and flow solutions to our customers for a variety of applications.

Our values of Commitment, Quality and Simplicity are reflected both in our product and business approach.

For fast and flexible service and high-quality products readily available worldwide, choose Tapflo.

Quality commitment

At Tapflo we are simply committed to quality. As a result, our production standards, as well as products quality, comply with various globally recognised certification and quality control standards. The Tapflo manufacturing process is certified according to ISO 9001:2015, confirming that our processes are appropriate, effective, customer-focused and continuously improved.

Tapflo values

Our culture is concluded in Our values

Commitment
We are different from our competitors because of our willingness to exceed the customers’ expectations, move fast and be flexible. Our culture is based on the spirit of togetherness, enthusiasm and integrity. We come from all over the world but we share the same values and we respect each other. We are committed.

Quality
We understand that the quality in our work is never better than the weakest link, that’s why we focus on every small detail. We share a common passion for continuously finding more efficient and effective ways to provide value to our customers. As a manufacturer we have control of the complete process both in terms of our products and the way we operate internally. That is why we manufacture the highest quality pumps in our segment.

Simplicity
We have a saying, “Simple is art” which means we try to find smooth and uncomplicated solutions in everything. By keeping it simple we can focus on the essential, like designing uncomplicated pumps with few components. For us it is a key to success; strive to simplify what is complex.
Diaphragm pumps
most versatile pumps on the market

Working principle
Tapflo diaphragm pump is driven by compressed air. Two diaphragms are working simultaneously to prime and push the liquid through the pump system. Valve balls work as check valves to let the liquid through in the right direction.

During each cycle the air pressure on the back of the discharging diaphragm is equal to the head pressure on the liquid side. Tapflo diaphragm pumps can therefore be operated against a closed discharge valve with no adverse effect to the life of the diaphragms.

Suction
One diaphragm creates a suction action when being pulled back from the housing.

Discharge
The other diaphragm simultaneously transmits the air pressure to the liquid in the housing, pushing it towards the discharge port.

Fast facts

Capacity 0-820 l/min
0 - 216 US gal/min
Pressure 0 - 8 bar (max 16 bar for TF series)
0 - 116 PSI (max 232 PSI for TF series)
Connection sizes 1/4” up to 3” (DN8 - DN80)

Pump materials
PE, PTFE, aluminium, cast iron, stainless steel AISI 316L, and PTFE coated aluminium

Features & Benefits

Run dry without damage
Easy to use, no need of guarding device

Solid, strong construction
Wide range of working pressures 0-16 bar (depending on pump series)

Thorough flow control
Flexible and easy to adjust

Few components & long life design
Low downtime and maintenance cost

Self-priming up to 5 m from dry suction pipe
More options of installation

Lubrication free air distribution system
Saves the environment from pollution

No electricity needed
Explosion proof versions
Ex-zone 1 available (ATEX group II, cat 2)

Air operated
Can operate against closed valve. Easy to install without special training (no electricity)
How to install Tapflo pumps

Tapflo Pumps are flexible and easy to install. The in- and outlet ports can rotate 180° to fit your piping system (PE & PTFE and metal series pumps).

**Flooded**

The piping system is designed with a positive suction head. This is the best way of installation where it is necessary to completely evacuate all liquid from the container, or where viscous (thick) products are transferred.

**Self-priming**

The Tapflo pump is designed to pull a high vacuum. It is able to evacuate an empty suction pipe without any damage to the pump. The suction lift is up to 5 meters (16.4’) from an empty suction pipe and up to 8 meters (26.2’) from a wetted pipe. The suction capability depends on the pump size (see pages 16, 23, 28).

**Submerged**

All Tapflo pumps may be submerged into the liquid. It is important to make sure that all components which are in contact with the liquid are chemically compatible. The air exhaust must be led to the atmosphere by means of a hose.
Key components of the Tapflo pump

Long life diaphragms

Tapflo diaphragms are of composite construction, superior for continuous heavy duty service, with a completely smooth surface in contact with the liquid. This results in no leak through and a diaphragm which is easy to keep clean. The diaphragms are available in various materials and colours to suit any requirements, they are made from EPDM, NBR, FKM, PTFE, PTFE TFM 1705b, EPDM white, PTFE with white EPDM back, NBR white.

Multilayer Design

An advanced process of preforming, curing, trimming and finishing results in a long life composite diaphragm that will last for many millions of cycles. All compounds are specially developed and optimized for composite diaphragm technology and compression molding production. Components are chemically bonded by bonding agents and adhesives.

Energy saving drive

The air valve is the driving heart of the pump, redirecting the compressed air to the chambers behind the diaphragms. The air valve is placed in the centre of the pump between the diaphragms, to minimize air ways and dead volumes. This all together is the key to a reliable and energy saving drive.

It is made for maintenance free duty with no lube air, thanks to the ingenious sealing system. It will not only save your money for lubrication, it will also protect environment from pollution.

The valve body is made from brass or optional PET or stainless steel AISI 316L.
Ball check valves
The Tapflo pump is fitted with four check valves, making sure that the liquid is transferred in the right direction through the pump.

The ball type valve is the most simple and reliable valve design. It has a good sealing capability and is easy to keep clean and to replace if necessary.

The ball valve materials are available in EPDM, NBR, PTFE, PTFE TFM 1635, PE1000, FKM, PU, Ceramic, SiC, AISI 316L to suit any kind of liquid.

Flap valves (Sanitary pumps)
Flap valves are used for pumping liquids containing big solids without damage. Tapflo flap valve pumps are able to pump solids up to 18 mm in T80 and T125, 42 mm in T225 and T425 and 95 mm in T825 pump size. Pumps can reach dry suction lift up to 4.5 meters.

Tapflo Flap Valve design has only two components and are hygienic thus easier to clean.

Magnetic ball lifters (Sanitary & Aseptic pumps)
Possibility to drain the pump is crucial in most hygienic applications. The ball lifting system from Tapflo could not have been easier.

Magnetic ball lifters are implemented in Sanitary and Aseptic series AODD pumps, to enable pump emptying without removing it from the installation when no other draining option is available. Rotating the pump is no longer needed.

Working principle
The valve balls, either made of AISI 420 or PTFE with steel core, are lifted by an influence of magnetic field generated by the ball lifting device. The ball lifting operation is made simply by attaching the magnets to the pumps manifolds.
Applications

Various liquids - Tapflo pumps are compatible with a very wide range of chemicals:

- Corrosive and chemical aggressive
- High and low viscous
- Abrasive
- Solid content
- Shear sensitive
- Flammable

Chemical industry

Transfer of all kind of acids, alkalis, alcohols, solvents and shear sensitive products such as latex and emulsions, as well as chemical waste products.

Surface treatment

Transport of chemicals from storage tanks, containers and baths, for example in pickling, galvanization and degreasing. Handling of waste products.

Water treatment

Pumping samples, dosing acids and alkalis for pH-control. Transfer of flocculent, suspensions, chemical reagents and sludges. Pumps are resistant to even most aggressive chemicals.
Pulp and paper industry
Transport of glues, sodium silicate, colours and titanium oxide etc. Bleaching products, sampling and wastewater handling.

Hygienic applications
Transfer of products like: soup, cream, syrup, milk, yoghurt, spirit, chocolate, dough, cream, paste, flavours, aromas, toothpaste etc.

Mechanical industry
Handling of oils, fats, lubricants, cooling liquids, washing and cleaning liquids, solvents, waste products etc.

Paint, print and varnish industry
Transfer of water- and solvent based paints, inks, varnishes, glues adhesives and solvents. Transfer, recirculation and blending of inks in printing industries.
Polyethylene pumps
Polyethylene (PE HD) has a superior wear resistance which is 6 – 7 times better than for polypropylene (PP). This fact makes the pump suitable for handling abrasive slurries etc. PE is resistant to most kind of aggressive chemicals such as concentrated acids and alkalis. Maximum liquid temperature is 70°C. Tapflo uses different grades of PE depending on the part. For valve seats and ball stoppers, which are most vulnerable to wear - UHMW PE1000 is used for best mechanical strength and abrasion resistance.

PTFE pumps
PTFE (virgin polytetrafluoroethylene) is a thermoplastic polymer with superior chemical resistance. The PTFE pump can handle even the most aggressive acids. Maximum liquid temperature is 110°C.

The PE & PTFE pump range
- TR9 - 11 l/min, 1/4"
- TR20 - 24 l/min, 3/8"
- T50 - 60 l/min, 1/2"
- T100 - 125 l/min, 1"
- T200 - 330 l/min, 1 1/2"
- T400 - 570 l/min, 2"
- T800 - 820 l/min, 3"

The ingenious Tapflo design

Few components and a simple design are common for all Tapflo pumps. The pumps are compact, easy and quick to maintain, keeping your service costs and process down time to a minimum.

Flexible installations

The connections may be rotated 180°. Simply turn the connections to fit your piping system. BSP and NPT threaded connections as standard, AISI 316L optional material or other connection types are available as an option. AISI 316 or other connections types are also available.

Solid and strong

The pump body is machined from solid PE or PTFE. The robust design will stand against mechanical forces as well as aggressive chemicals.

Low air consumption

The air distribution system is designed to ensure the shortest possible airflow path and eliminate dead volumes. This results in high efficiency and low air consumption.

Chemical design

The compound diaphragm has a completely smooth liquid side surface and with no metal in contact with the pumped liquid. Ideal for a safe chemical handling.

PE pumps - suitable for most chemicals and abrasive liquids

PTFE pumps - suitable for the most aggressive chemicals
Special versions

**Drum pumps | TD series**

Light and mobile solution for emptying drums and containers Tapflo TD pumps are irreplaceable in such applications.

The pumps are fitted with a drum tube in polypropylene (PP) or PTFE and a handle in AISI 316L stainless steel.

**The PE & PTFE drum pumps range**

- TRD20 - 24 l/min, ½” suction, ⅜” discharge
- TD50 - 60 l/min, ¾” suction, ½” discharge
- TD100 - 125 l/min, 1 ¼” suction and 1” discharge

**Features & Benefits**

- **Customizable tube length**
  The drum tube is delivered in any length up to 2 m

- **Highly mobile and versatile**
  Pumps can be easy moved between different drums and containers

- **Handy and convenient**
  Compact pump equipped with comfortable handle

**Integrated heavy duty flanges | 3D/3A**

The robust design of integrated flanges proves itself useful when there is a risk of vibration from the installation. The solid manifolds provide better stability and sealing for the pump.

This design is a perfect solution for most demanding applications such as in TF Filter press pumps where pump operates at higher pressures.

- **Available for sizes:** T50, T100, T200, T400
- **Available materials:** PE, PE cond., PTFE, PTFE cond.
- **Flange standard 3A = ANSI flanges 3D = DIN flanges**
**Special versions**

**Pump with built-on dampener | TK series**

The built-on dampener is an ideal solution to eliminate pressure variations on the pumps discharge where space in the installation is limited.

- **Available for sizes:** TRK20, TK50, TK100, TK200

**Twin pumps | TT series**

Tapflo PE & PTFE series pumps may be fitted with double in/outlet to achieve “two pumps in one” for blending, mixing or recirculation of liquids.

The liquid in one pump chamber is separated from the other one.

**Examples of applications**

- Mixing of two liquids with one pump (50/50 ratio) (installation example)
- Transfer and return of printing ink from storage to ink tray
- Transfer and agitation of liquids with one pump

**Explosion proof pumps | TX series**

The ATEX directive 2014/34/EU (also known as ATEX 114) is applicable on products used in explosion hazardous zones.

Tapflo pumps made from conductive (carbon filled) plastics PE or PTFE are made for use in explosion hazardous environments. They can be used in Ex-zone 1 and Ex-zone 0. The conductive material ensures that no electrostatic loads will be accumulated in the pump.

The conductive pigment in the material reduces the surface resistance. Transfer of alcohol and solvents are examples of applications for the Tapflo TX and TZ pumps.
Performance curves

The performance curves are based on water at 20°C. Other circumstances might change the performance. **Example** see the red line

A flow of 6 litre/minute is desired. The discharge head is calculated to 30 mWC. We choose a TR9. It requires an air pressure of 6 bar and will consume approximately 0.10 Nm³/minute.

For changes of capacity due to suction lift or viscosity, please see page 21

### Material of components

| Pump housing and all wetted thermoplastic details | PE, PE conductive, PTFE, PTFE conductive |
| Centre block (not wetted) | PE, PE conductive, aluminium |
| Diaphragms | PTFE, FKM |
| Valve balls | PTFE, EPDM, NBR, AISI 316L***, PU, Ceramic***, FKM |
| Rod valves (TR9 and TR20) | PE, PTFE |
| Air valve | Body: brass (std.), stainless steel AISI 316L or PET |
| O-rings (wetted) | PTFE, EPDM, FKM, FEP/FKM |
| Housing pin screws | Stainless steel |
| Diaphragm shaft | Stainless steel AISI 316L (TR9, TR20, T800) / 304L (T50 –T400) |
| Drum handle (TD pumps) | Stainless steel AISI 316L |
| Reinforcement plates (TF pumps) | Stainless steel AISI 304 |

---

* = Recommended flow is half of the max flow, i.e. recommended flow for a T100 is 62 l/min (16.3 US gpm)

** = The value is based on pumps with PTFE diaphragms (other materials - please contact Tapflo). It should be remembered that the volume per stroke may vary depending on the pump's operating parameters.

*** = Not available on T800

**** = This is max value with stainless steel valve balls, other valve ball materials may reduce the suction. Please consult us.

---

## Pump code

The model number on the pump tells the pump size and material of the pump components

- **I.** T = Tapflo diaphragm pump
- **II.** Basic options:
  - B = Backup diaphragm system
  - D = Drum pump
  - F = Filter press pump
  - K = Pump with built-on dampener (TR20-T200)
  - R = Rod valve pump
  - T = Twin inlet/outlet pump
  - V = AISI 316L valve seat / spacer
- **III.** Pump size
- **IV.** Material of wetted thermoplastic parts:
  - P = PE (polyethylene)
  - T = PTFE
  - L = PP
- **V.** Material of diaphragms:
  - B = PTFE TFM 1705B (solvents)
  - E = EPDM
  - N = NBR (nitrile rubber)
  - V = FKM
- **VI.** Material of valve balls:
  - E = EPDM
  - N = NBR (nitrile rubber)
  - T = PTFE
  - K = Ceramic
  - V = FKM
  - W = White (food grade) EPDM
  - Z = PTFE with white back (food grade)

* = Ask us for complete pump code with all available options and executions. Changes reserved without notice
Metal series pumps

The compact, smooth and simple design is common for this series. Materials available are aluminium, cast iron, stainless steel and PTFE coated aluminium.

**Aluminium and cast iron pumps**
For transfer of pH-neutral fluids, both thin, thick, high solid content or abrasive. The aluminium and cast iron pumps are found in most fields; workshop and paint industries, purifying plants etc., to mention only a few.

**AISI 316 stainless steel pumps**
Made in lost wax cast method, ensuring great accuracy and finish. The stainless steel pumps combine great mechanical strength with good chemical features. AISI 316 is resistant to aggressive liquids like nitric acid and sodium hydroxide. The centre block, which is not in contact with liquid, is made from corrosive resistant polypropylene (PP) as standard (other materials upon request).

The metal pump range

- T25* - 26 l/min, 1/2"
- T70 - 78 l/min, 3/4"
- T120 - 158 l/min, 1"
- T220 - 330 l/min, 1 1/2"
- T420 - 570 l/min, 2"
- T820 - 820 l/min, 3"

* = aluminium and cast iron only

FDA EN 10204

AT Ex Compliant

Reach Compliant

RoHS Compliant
The ingenious Tapflo design

You will discover and appreciate simplicity when you maintain the pump. We use approximately 70% fewer parts compared with other brands.

- **Flexible installations**
  The connections may be rotated 180°. Simply turn the connections to fit your piping system. Threaded BSP or NPT connections are standard. Twin connections are also available.

- **Durable valve seats**
  The valve seat is under constant stress from the movement of the valve ball. To obtain the best wear resistance, the integrated seat is made from AISI 316 stainless steel.

- **Optional Camlock connections**
  Metal series diaphragm pumps can be ordered with CAMLOCK connections. The coupling is connected by simply opening the coupler arms and inserting the adaptor into the coupler.

- **Low air consumption**
  The air distribution system is designed to ensure the shortest possible airflow path and eliminate dead volumes. This results in high efficiency and low air consumption.

**Aluminium and cast iron** - suitable for pH neutral liquids

**Stainless steel** - suitable for chemicals and food applications
This option is a great way to empty the pump of liquid if there is no possibility of pump disconnection from the installation.

With this easy solution you can simply raise the ball from the valve seat and allow the liquid to flow out of the pump.
Special versions

Pump with built-on dampener | TK series

The built-on dampener is an ideal solution to eliminate pressure variations on the pumps discharge where space in the installation is limited.

> Available for sizes: TRK20, TK50, TK100, TK200

Twin pumps | TT series

Tapflo metal series pumps may be equipped with double in/outlet to achieve “two pumps in one” for blending, mixing or circulation of liquids. The liquid in one pump chamber is separated from the other one.

Examples of applications

> Transfer of two different liquids, two pumps in one
> Mixing of two liquids with one pump (50/50 ratio)
> Transfer and return of printing ink from storage to ink tray
> Transfer and agitation of liquids with one pump (installation example)

Explosion proof pumps | TX series

The ATEX directive 2014/34/EU (also known as ATEX 114) is applicable on products used in explosion hazardous zones. All aluminum and cast iron pumps are by standard ATEX approved and permitted to be used in Zone 1, having model names TX…

The standard stainless steel pumps are not allowed to operate in hazardous environments. Special conductive TX and TZ pumps are available for such applications. All plastic parts utilized in such pumps are made from conductive (carbon filled) materials thus made for use in explosion hazardous environments. What is more ATEX pump are equipped with a grounding connection.

The aluminium and cast iron pumps can be used in Ex-zone 1. Stainless steel pumps can be utilized in Ex-zone 1 and Ex-zone 0.

The conductive material ensures that no electrostatic loads will be accumulated in the pump.
Performance curves

The performance curves are based on water at 20°C. Other circumstances might change the performance. See below how the capacity will change at different viscosities and suction lifts. These curves are valid for all metal pumps.

Example see the red line ← — — ← —
A flow of 10 litre/minute is desired. The discharge head is calculated to 20 mWC. We choose a T25. It requires an air pressure of 4 bar and will consume approximately 0.10 Nm³/min.

### Material of components

- **Pump housing and all wetted metal details:**
  - aluminium and cast iron
  - aluminium, cast iron or stainless steel AISI 316L
  - aluminium or AISI 316L
- **Centre block, alu and cast iron pumps:**
  - aluminium (standard) or cast iron
- **Centre block, AISI 316L pumps:**
  - PP (standard), conductive PP or aluminium
- **Diaphragms:**
  - NBR, FKM, PTFE, PTFE 1705B or EPDM
- **Valve balls:**
  - NBR, PTFE, AISI 316L****, EPDM, polyurethane or ceramic****
- **Air valve:**
  - Brass / NBR (standard) or AISI 316L / FKM or PET / NBR (standard on TX820), PET/FKM
- **Gaskets:**
  - Klingerseal/NBR (standard), Klingerseal/EPDM, Klingerseal/FKM, FEP/FKM (stainless steel pumps)
- **Housing screws:**
  - Steel on aluminium and cast iron pumps, A4-80 on stainless steel pumps
- **Diaphragm shaft:**
  - Stainless steel AISI 316L (TX25, T820) / 304L (T70 –T420)
- **Drum handle (TD pumps):**
  - Stainless steel AISI 316

* **= Recommended flow is half of the max flow, i.e. recommended flow for a T120 is 79 l/min (20.8 US gpm).**

** = The value is based on pumps with PTFE diaphragms (other materials - please contact Tapflo). It should be remembered that the volume per stroke may vary depending on the pump's operating parameters.

*** = This is max value with stainless steel valve balls, other valve ball materials may reduce the suction. Please consult us.

**** = Not available on TX820.

---

## Pump code

The pump code details the specification, maximum capacity and materials of the major components.

**I. T = Tapflo diaphragm pump**

**II. Basic options:**

- **B = Backup diaphragm system**
- **D = Drum pump**
- **F = Filter press pump**
- **L = Valve lift system (drain system)**
- **P = Powder pump**
- **T = Twin pump (double in/outlet)**
- **X = ATEX approved, group II, cat 2 (zone1)**
- **Z = ATEX approved, group II, cat 1 (zone 0)**

**III. Pump size**

**IV. Material of wetted metal parts:**

- **A = Aluminium**
- **C = Cast iron**
- **S = Stainless steel AISI 316**
- **X = PTFE coated aluminium**
- **Y = FKM**

**V. Material of diaphragms:**

- **B = PTFE TFM 1705B (solvents)**
- **E = EPDM**
- **N = NBR (nitrile rubber)**
- **T = PTFE**
- **V = FKM**

**VI. Material of valve balls:**

- **B = PTFE TFM 1635**
- **E = EPDM**
- **N = NBR (nitrile rubber)**
- **T = PTFE**
- **S = AISI 316 stainless steel**
- **P = PU (polyurethane)**
- **K = Ceramic**
- **V = FKM**

* **= Ask us for complete pump code with all available options and executions. Changes reserved without notice.**
Sanitary series pumps

Hygienic design - made from electropolished stainless steel AISI 316L to meet the requirements in hygienic installations.

The Tapflo sanitary series is particularly designed to meet the requirements of the food, beverage, pharmaceutical and cosmetic industries.

Lubrication free air distribution system, maintenance free ball check valve system and total visual inspection of the wetted parts are some of the major features for this pump series.

The materials used on certain models comply with the FDA guidelines.

Models with extra fine internal surface finish Ra < 0.8 and Ra < 0.5 are available upon request.

The sanitary pump range

- T30 - 28 l/min, 1”
- T80 - 78 l/min, 1”
- T125 - 155 l/min, 1 1/2”
- T225 - 330 l/min, 2”
- T425 - 570 l/min, 2 1/2”
- T825 - 820 l/min, 3”

The sanitary design

Made to be clean

**Quick dismantling**
The clamp system ensures quick and easy dismantling without any tools.

**Variety of connection types**
The pump is supplied as standard with SMS3017/ISO2037 clamp connections. However, the pump may be equipped with almost any type of connection used in the hygienic field – DIN 11851 thread, SMS 1145 thread, DIN 11864 aseptic connections to mention a few.

**Pollution free air valve**
The sealing system is lubrication free, always keeping your product and environment free from oil contamination.

**Plain surface**
The sandwich diaphragm has a completely plain surface, which eliminates bacteria growth problems. The diaphragm is available in food grade materials - PTFE, white EPDM or NBR FDA.

**Superior finish**
Both liquid side and outside is electropolished, to obtain superior finish and hygiene. Special surface finish may be done according to your requirements.

**Easy draining**
*Drain the pump by turning the pump in its support (T80-T825)*
Our design allows for total visual inspection of the wetted parts. There are no hidden areas where bacteria can grow. The manifold clamps and the housing screws are simply removed for complete disassembly and cleaning. The pump is also designed for cleaning and sterilization in place – C.I.P. and S.I.P. After such operations, the pump is easily turned in its support for drainage.
Special versions

Heating jacket

The heating jacket is used when the pumped product has to maintain a specific temperature, high or low, throughout the process. A heating or cooling medium is continuously circulated in the heating jacket. The jacket is covering all the wetted parts of the pump.

Available for sizes: T80, T125, T225, T425

Flap valves for big solids

Flap valves are available for the sanitary pumps, ideal in applications with bigger size and delicate solids. The gentle pumping principle will maintain solids without any destruction.

Models available with flap valves:
- T80 (max 18 mm solids)
- T125 (max 18 mm solids)
- T225 (max 44 mm solids)
- T425 (max 44 mm solids)
- T825 (max 100 mm solids)

Magnetic ball lifters

Magnetic ball lifters are implemented in Sanitary AODD pumps, to enable pump emptying without removing it from the installation when no other draining option is available. Rotating the pump is no longer needed.

Counter-connections

In order to ease the pump connection with installation Tapflo has added a full range of counter-connections to sanitary pumps. They fit pumps with standard tri-clamp connection as well as optional DIN11851 and SMS 1145 connections.
**Performance curves**

The performance curves are based on water at 20°C. Other circumstances might change the performance. See below how the capacity will change at different viscosities and suction lifts. These curves are valid for all sanitary pumps.

**Example** see the red line

A flow of 25 litre/minute is desired.

The discharge head is calculated to 25 mWC. We choose a T80. It requires an air pressure of 4 bar and will consume approximately 0.20 Nm³/minute.

Aseptic series pumps
Keeping your process clean

Tapflo Aseptic series pumps are designed for service in pharmaceutic-, biotech- and food industries where a clean process is the key.

Tapflo Aseptic series is EHEDG certified, has FDA and USP VI approved materials and conform to the ATEX directive 2014/34/EU.

Typical applications

<table>

<td>Cream, paste, alcohol and filtration gel</td>
</tr>
</tbody>
</table>

Features & Benefits

- No bacteria growth
  no horizontal areas inside the pump

- Easy cleaning and draining
  designed for CIP and SIP cleaning

- Gentle pumping
  no damage of sensitive products

- Wide range of connection types
  TriClamp, sanitary threads (DIN, SMS) etc.

- Hygienic surfaces
  housings made from electro polished stainless steel AISI 316L, Ra < 0.8 (standard) or Ra < 0.5 (on request)

- No leakage
  no rotating shaft seals

- Flexible installation
  self-priming

- Reliable in service
  can run dry and against closed valve without damage

- Environmental friendly
  lube free air valve

- Hygienic diaphragms
  designed without any nuts or plates on the pumped side
The EHEDG certificate

The EHEDG (European Hygienic Engineering & Design Group) certificate is your guarantee that the design is according to the hygienic guidelines. Furthermore the pump is cleanability tested, which means bacteria does not grow in the pump after cleaning and draining procedure.

Intelligent pumps - TC series

TC Intelligent pumps are fitted with ingenious LEAP® technology developed by Tapflo.

LEAP® or ‘Low Energy Air Pump’ is a patented technology used in AODD pumps to reduce the minimum operating air pressure by reducing internal losses and friction found in conventional AODD pumps.

LEAP uses a unique indirect system to detect the position of the diaphragm shaft controlling the diaphragm movement automatically.

Features & Benefits

- Available in Plastic, Metal and Sanitary series AODD pumps: TC50 - TC425 (T50 - T425 equivalent)
- Retrofit: Leap can be fitted to any existing Tapflo Air Operated Diaphragm Pumps
- Batch Dispensing: allowing the pump to automatically stop after the required volume has been dispensed.
- Improved Lifespan: the TC series uses an air valve that has a significantly longer life expectancy over rubber seal technology.
- Dry Running: by analysing the frequency of pulses, the pump can analyse when it is running dry.
- Noise Reduction: ability to utilise lower air pressure reduces the noise of the pump.
- Electrical feedback: signal allows for external monitoring of the pump process.
- Improved Maintenance: main air valve can be changed in under two minutes without the removal of the pump from the process line.
- Control Simplification: no need for an external pneumatic solenoid valve, reducing costs and simplifying control.
- Dead Heading: as with dry running, the frequency of pulses can be monitored, alerting if the pump has a blockage.

Graph showing fluid flow against air pressure required

The pump fitted with LEAP® Technology is able to start pumping at 0.3 bar without stalling, in test the pump was already achieving flow rates of 70% of its maximum open end flow before other pumps had even started.
Filter press pumps - TF series

The Tapflo pump station for filter press feeding is a very compact unit that can be mounted directly to the filter press.

**TF series**

The design and function allows the user a straightforward pressing of slurries. Pressure regulator is already mounted to the unit.

An external pressure booster doubles the delivery pressure. For example, with available air pressure of 7 bar, the delivery pressure will be maximum 14 bar.

| TF pumps are based on standard Tapflo AODD pump design |
| PE & FFFE: TF 50 | TF 100 | TF 200 | TF 400 |
| Metal pumps: TF 70 | TF 120 | TF 220 | TF 420 |

**Features & Benefits**

- Can run dry
- Self priming
- High pressure transmission up to 1:2
- Few parts – easy to maintain
- Long service life
- Reliable and compact

**The Installation**

Adding a pump to an existing filter press was never such easy. The pump is already equipped with a pressure booster, manometers, regulation knob and all essential hoses and fittings.

* = This max flow is obtained when using a bypass round the pressure booster at low pressure
Reduced contamination
The powder is transferred in a hermetic system from the powder container to your process.

Economical and compact solution
The Tapflo powder transfer pump can do the same job as many complex and large powder systems. The compact design also makes the unit portable.

What kind of powders?
The powder transfer pump will handle different types of process powders, with specific weight from 80 up to 720 kg/m³ dry weight. Generally, if the powder does not clump together when squeezed in hand, the Tapflo powder transfer pump can be used successfully. A few examples of common powders are sintering powder, carbon black, resins and silicones.

Capacity
The capacity of the powder transfer is extremely different from one powder to another, depending on the consistency and weight etc.

Working principle
No start up problems
The air induction system eliminates powder pack up problems when starting the pump.

Air is induced to the powder side of the pump for diffusion of the powder. The induction flow can manually be adjusted by means of a needle valve to obtain an optimum performance.

Features & Benefits

- Economical compared with other complex powder systems
- Convenient and safer than manual powder handling
Pharmaceutical pumps - 5UVI series

USP VI approved pharmaceutical series air driven pump for pharmaceutical and biotech industries

This pump series was developed in co-operation with one of the world leading supplier to the biotech market. It serves the biotech- and pharmaceutical industries in numerous applications.

Our unique USP approved (United States Pharmacopoeia) hygienic PTFE or PP pump, features all wetted parts in USP class VI certified materials.

Simplicity

Pump housing with only three parts makes it extremely easy to maintain.

Superior finish

High finish and hygienic approved materials.

The Pharmaceutical series pumps

- T53 60 l/min; ¼”
- T103 125 l/min; 1”
- T203 330 l/min; 1 ½”
- T403 570 l/min; 2”

Features & Benefits

- Sanitary design smooth internal surfaces
- Inert materials no contamination of the pumped product
- USP class VI approved materials
- Extremely easy to maintain pump housing with very few components
Active pulsation dampeners

The Tapflo pulsation dampener works actively with compressed air and a diaphragm, automatically setting the correct pressure to minimise the pulsations.

The active pulsation dampener is the most efficient way to remove pressure variations on the discharge of the pump.

The Tapflo pulsation dampener works actively with compressed air and a diaphragm, automatically setting the correct pressure to minimise the pulsations.

**Working principle**

When the pressure in the piping system decreases, due to the pulsating nature of the pump operation, the pulsation dampener supplies extra pressure to the discharge between the pump strokes, therefore supplying a steady flow of pumped medium. This pumping action created by the dampener, decreases the pressure variations and pulsations.

**Options & accessories**

- Pulsation dampener with stand
- Pulsation dampener with pump
- Pulsation dampener with guardian
- TK built-on dampener

**The dampening effect**

- Minimized vibrations and water hammer effects
- Protection of all kinds of instruments in your piping system
- Optimized pump performance and reduced maintenance costs

Explosion proof models are available
Certified according to directive 2014/34/EU (ATEX), group II, cat 2 , for use in EX-zone 1. **Contact us for information.**

**Dampener code**

The details, specification, size and materials of the major components.

I. DT - Tapflo active pulsation dampener
II. Basic options:
- X = ATEX approved, group II, cat 2
- Y = Material of wetted damper housing:
  - A = aluminium
  - B = polyethylene
  - C = stainless steel AISI 316L
  - D = PE
  - E = EPDM
  - F = PTFE 1705B (solvents)
  - G = White (food grade) EPDM
  - H = NBR (nitrile rubber)
  - L = Other Connections
  - M = M4x20
  - N = M4x20
  - P = M8x22
  - Q = M8x22 PE
  - R = M8x22 PTFE
  - S = M8x22 PE
  - T = M8x22
  - U = M8x22 PE
  - V = M8x22 PTFE
  - W = M8x22 PE
  - X = M8x22 PTFE
  - Y = M8x22 PE
  - Z = M8x22

</table>
The Guardian is an energy conservation device designed to protect an air operated double diaphragm (AODD) pump from operating in an inefficient manner that uses unnecessary energy and reduces the life of its parts. It also offers the added benefit of providing greater safety to applications of high risk.

The Guardian directly monitors the discharge fluid pressure against its set point stopping the pump if the media pressure increases above the set point (closed valve) or falls below the set point (dry-run) dependant on configuration.

**Applications of Guardian systems**

**Barrier Protection**

Barrier pumps (TB) have an additional set of diaphragms used to back-up the primary diaphragms. In case of a breach the liquid remains inside the pump, instead of leaking out through the air exhaust. The Guardian monitors the pressure between the primary and secondary diaphragms, stopping the pump if the pressure increases above the set point.

**Dry run & stop**

The Guardian monitors the fluid discharge pressure of the pump, stopping it if the pressure falls below the set point, caused by a lack of media on the suction causing air to be ingested into the pump.

**Dead head & stop**

The Guardian monitors the fluid discharge pressure of the pump, stopping it if the pressure rises to the set point, caused by a closed valve or over pressure in the discharge line.

**Dead head & restart**

The Guardian monitors the fluid discharge pressure of the pump, stopping it if the pressure rises to the set point, caused by a closed valve or over pressure in the discharge line. When the pressure falls below the set pressure, the pump automatically restarts.
Control systems

Pneumatic batch control
Pneumatic batcher can control any Tapflo AODD pump to deliver accurate and repeatable volumes. Fully programmable allowing you to set the batch amount (TPUK-BP) or batching time (TPUK-BT).

Pneumatic level control
A fully pneumatic automatic level system used to maintain set liquid levels within a sump or tank.

Stroke counter / low pressure VFC
A stroke to volt free contact (VFC) is available for integration with PLC systems. Simply connect to any AODD pump via the air exhaust muffler to monitor the pump strokes.

Life counter
Tapflo’s life counter simply connects to the AODD pump air exhaust, representing the strokes on the LCD display. Compact, easy to use and cost effective this simple system will allow you to control servicing and implement a preventative maintenance routine.

Mobile solutions for pump units and systems

Mobile pump units are found as the best solution for the users of spread technological processes. The portability of the Units allows easy movement to various locations. This means almost limitless application.

Trolley S | 2-wheel
Tapflo standard AODD pumps with capacity up to 125 l/min (pump sizes: up to 100/120, except T80),

Trolley M | 4-wheel
Tapflo standard AODD pumps with capacity up to 570 l/min (pump sizes: up to 400/420, except T425),

Hygienic trolley
Hygienic trolleys offered by Tapflo are available in two sizes. M Trolleys are used for standard pumps up to T425. L Trolleys are used for pump dampener assemblies.

For further details, please check the separate brochure systems & accessories for pumps
There are many benefits of using an individual filter regulator and needle valve for your AODD pump. You will always be able to run the pump with right air quality and optimum pressure and speed to save energy. Furthermore, the lifetime of pump components will increase. The kit includes a filter regulator, gauge, wall bracket, needle valve, and/or water separator. The filter is 5 micron and regulator is 0-12 bar, available in sizes 1/8” up to 3/4”.

The Pneumixer was initially developed for the paint and ink industry where most raw materials in drums or containers settle out over time and need to be mixed or blended prior to use. This usually means rolling, shaking or pumping to a mixing vessel; that adds time, waste, mess and expense.

Features & Benefits

- No paddles
- No rotating blades
- Variable agitation
- Suits all containers up to 1000 litre IBC
- No moving parts utilises pump power to mix & dispense
- Eliminates problems with conventional mixing
- No air entrainment
- No shear
- Closed vessel mixing system
- Fully controllable pneumatic operation and control
- Reduced environmental exposure
- No need for pumping to mixing vessel

Transfer mode

The discharge valve is open and the recirculation valve is partially open, to both mix and to transfer the product out of the Pneumix.

Mixing mode

The discharge valve is closed and the recirculation valve is open, to allow the product to circulate in the container.
Tapflo products and services are available in 75 countries on 6 continents.

Tapflo is represented worldwide by own Tapflo Group Companies and carefully selected distributors assuring highest Tapflo service quality for our customers' convenience.
